

Problem Statement: Amazon Sales Analysis

You have been given a dataset from Amazon that contains sales data across various product categories like Men Shoes, Cameras, Men Clothes, and Car Accessories. The dataset includes detailed information about product categories, sales values, sales by time (month and week), and customer reviews.

Your task is to analyze this dataset to uncover key insights related to revenue trends, product performance, and customer behavior.

Create a dashboard and answer the following key business questions to help the company improve its sales performance and product strategy:

1. Total Revenue (YTD Sales): Identify the overall sales generated year-to-date.
2. Quarterly Sales Overview (QTD Sales): Measure how much revenue has been earned in the current quarter.
3. Sales Trends by Month: Visualize how monthly sales have changed throughout the year.
4. Sales Trends by Week: Observe weekly sales fluctuations to identify peak shopping periods.
5. Top Product Categories by Revenue: Determine which product categories are generating the highest revenue.
6. Top 5 Products by Sales: Identify the top-performing individual products by year-to-date sales.
7. Top 5 Products by Customer Reviews: Discover which products have received the highest customer engagement.
8. Sales Distribution by Quarter and Category: Use filters to analyze category-wise and quarter-wise performance.
9. Customer Demand Analysis: Understand patterns based on product popularity and seasonal

changes in demand.

10. Product Category Contribution: Evaluate how each product category contributes to the total revenue.
